

2) Change effects (colour, etc), Press key and Wait __ sec.

1) Start by creating the following program:

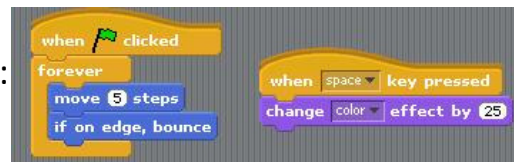

- Now that you have your sprite moving slowly, we are going to create a program where the cat is moving and changing colours at the same time.

2) Build this program

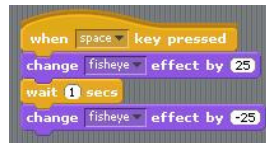

- Your script area should now look like this:

- Now click on the  to move the cat, then press the spacebar. Notice that the cat changes the shade of the colour each time you press spacebar on your keyboard. Click on the  to stop the program and to get back the cat's original colour.

3) Now create this program:

and click the green flag.

- Modify the effect that changes when you press the spacebar. You can choose from colour, fish eye, whirl, pixelate, mosaic, brightness, and ghost effects. You can also add a negative sign (-) before the 25.

- You can choose which key you use to make your sprite change.

EXTRA CHALLENGE

1) Using all 4 arrows have your sprite change to a different look with each arrow.

2) Use the  to create your own program.
